

Entrepreneurship Series for the Cardano Community

Free, practical venture-building education for Cardano founders

EXECUTIVE SUMMARY

Emerge Society completed a reusable 12-lesson entrepreneurship course that takes a learner from founder motivation and opportunity discovery through customer validation, business modeling, finance, funding, pitching, and a 90-day launch plan. All 12 complete hour-long lessons are public on YouTube. The course has been submitted to Wisdom.courses, with an additional interactive implementation at Block Launch Institute.

PROJECT NAME

Entrepreneurship Series for the Cardano Community

PROJECT MANAGER

Lloyd Duhon

PROJECT STARTED

March 11, 2024

PROJECT NUMBER / CHALLENGE

1100128 • Cardano Open: Ecosystem

APPROVED GRANT AMOUNT

156,700 ADA

PROJECT COMPLETED

September 8, 2026

12/12

LESSONS COMPLETED

12

PUBLIC FULL-HOUR VIDEOS

12

INTERACTIVE LMS LESSONS

70+

VERIFIED DISTRIBUTION LINKS

Challenge KPIs and results

CHALLENGE OBJECTIVE	RESULT	HOW IT WAS ADDRESSED
Strengthen entrepreneurship skills in Cardano	MET	A complete 12-lesson pathway now covers customer discovery, value propositions, business models, testing, markets, finance, funding, pitching, and launch planning.
Create accessible, reusable education	MET	All complete classes are public and free on YouTube; the structured course was submitted to Wisdom.courses; an interactive LMS version adds exercises, progress tracking, and capstone work.
Validate reach through participation and social metrics	PARTIAL	Publication reach is evidenced by 70+ verified public distribution links and 13 Forum posts. Because the course has just launched, mature learner completion, feedback, and outcome data remain a next-stage measurement task.

Project KPIs and how they were addressed

PLANNED OR FINAL KPI	RESULT	EVIDENCE-BASED EVALUATION
12 entrepreneurship lessons	MET	12 of 12 planned lessons completed, each combining instruction, reading, and an applied learner artifact.
YouTube publication	MET	12 complete hour-long lessons published publicly in an ordered course playlist, improving reviewer and learner access.
Short-form and social distribution	MET	At least 70 verified public links across YouTube, TikTok, X, LinkedIn, Instagram, and Facebook; the count excludes an accidental duplicate Lesson 10 batch.
Cardano-community sharing	CHANGED	CardanoSpot was archived. Cardano Forum became the durable public community record: one announcement per lesson plus a correction/consolidation post.
Course destination	CHANGED	Catalyst approved changing the destination to Wisdom.courses. The full 12-chapter, 12-lesson course was submitted there. No platform-approval claim is made.
Live After Town Hall / X / Twitch format	NOT AS PROPOSED	The original live format, including Twitch, was not completed exactly as proposed. The final output is an evergreen, public, self-guided course with direct lesson-level evidence.
Interactive learning pathway	MET	12 Block Launch Institute lessons add readings, saved work, progress tracking, completion credentials, and a capstone path.
Final closeout deliverables	MET	This written report and a public 1080p YouTube closeout video document outcomes, changes, evidence, learnings, and next steps.

Key achievements, collaboration, and engagement

A coherent founder pathway

The deliverable is more than a video collection. Learners create a connected set of founder artifacts: a Founder Why, opportunity shortlist, customer evidence, value proposition, Business Model Canvas, validation experiment, market position, financial assumptions, funding plan, pitch, venture snapshot, and 90-day roadmap.

Reviewer-friendly public evidence

Each lesson has its own permanent full-length YouTube link, LMS lesson page, and Cardano Forum evidence. The ordered playlist and Wisdom course page provide consolidated access, while the Forum thread preserves a Cardano-community record.

Multi-channel access

YouTube removes authentication barriers; Wisdom.courses provides a structured course destination; Block Launch Institute adds interactive features. These complementary formats serve reviewers, self-directed learners, and founders who want guided project work.

Transparent course correction

The team documented delivery changes directly. The approved Wisdom destination change was implemented, the unavailable CardanoSpot channel was replaced with Cardano Forum, and complete hour-long videos were created to make scope and duration directly verifiable.

Measurable impact

100%

of planned lessons completed and publicly accessible as full classes

12

practical learner artifacts culminating in a venture snapshot and launch roadmap

3

complementary course access points: YouTube, Wisdom.courses submission, and BLI

Key learnings

Direct evidence must be designed alongside the work. Segmented videos and authenticated systems can show quality but make duration and completeness harder to verify. One permanent, public, full-length URL per lesson creates a clearer chain of evidence. Future Emerge Society courses will adopt that structure from the outset.

Next-stage plans

Keep the course free and evergreen; continue promotion; collect learner completion and qualitative feedback; monitor public engagement; refine exercises from real learner use; and reuse the production, LMS, and evidence infrastructure for future Emerge Society courses.

Why this project matters. Strong Cardano ventures require more than ideas and funding applications. Builders need customer evidence, a defensible value proposition, workable economics, a credible pitch, and an executable plan. Catalyst funding allowed this practical foundation to be made free to the public.

Accountability note: The public Catalyst record lists 156,700 ADA as the approved/requested grant amount. This report does not characterize that full amount as received; it reports completed outputs and publicly verifiable evidence.
